A BOND BETWEEN NATIONS

THE visiting French General stopped his hostess with a gesture as she was explaining rather volubly how to use the Otis Automatic Elevator in her Park Avenue residence.

"Spare yourself the trouble, dear Madam. I shall need your help in finding my way about this vast city; you will have to explain to me a hundred intricacies of your American life, from the best manner of facing a large audience of your compatriots to the best manner

of eating your Indian corn, but at least I am as familiar with your elevators as you yourself. Between floors I am at home, for your Otis Elevators are as indispensable to Paris as to New York, no matter how wide the difference between the two cities."

Every city, every separate building presents its own problem, which has been solved, in all parts of the civilized world by the Otis Elevator Company.

European cities do not have the high buildings that are constructed in this country, and therefore their elevator service is not as intensive, but Otis elevators serve the needs of their business life the same as they do in this country.

The Grands Magasins du Printemps illustrated, is one of the large department stores of Paris, and contains fifteen Otis Elevators and seven Otis Escalators. Many French apartments have installations of Otis Automatic Elevators.

To Prepare For Your Job

LOWER COSTS, greater safety and increased all 'round efficiency are resulting from the rapid advancement which is taking place in explosives engineering. At mines, quarries and on construction work throughout the world improvements in methods of drilling, blasting, loading, and transporting of coal, ore and stone are constantly being made, and every month some of these are reported in "The Explosives Engineer", a unique, illustrated periodical devoted to these important subjects.

NEW OFFER

Less than 3c a Month

WE are making a new offer of a three years' subscription to "The Explosives Engineer" for one dollar postpaid anywhere in the United States. This will apply to all of our present readers as well as to new subscribers. Each issue is exhausted shortly after publication, so it is advisable to send in subscriptions at once in order to secure the November number. Attach a dollar bill to the coupon and keep abreast of developments in mining, quarrying and construction for 36 months.

THE EXPLOSIVES ENGINEER
WILMINGTON DELAWARE

The November Issue

Truly amazing figures are revealed in the November issue by Daniel Harrington, eminent Consulting Engineer of Salt Lake, in his article "Coal Mine Blasting from the Surface", which describes the system of firing shots after all men are out of the mine. No student of coal blasting problems should miss this story.

Other articles which contain practical, usable information are "The Zinc Mines of Mascot"; "Channeling with Hammer Drills and Rock Dusting Equipment at Dawson, New Mexico".

Otho M. Graves, President, National Crushed Stone Association, tells what that organization's recently established Engineering Bureau will mean to the crushed stone industry, and there is an inspiring short biography of Howard I. Young.

Regular features of every issue include the popular Blaster Bill and Wilyum Jan cartoons, and an index of the month's books, articles and patents on drilling, blasting and allied subjects.

The Ohio State Lantern

Is recognized as the official campus publication.

It prints all news of student interest.

Sums up student opinion thru its editorials.

Serves as an index in telling the student when and where to buy.

The Greater KOEHRING

[Upper steel frame is hinged directly above the level of the top of the drum, giving the paver shipping height, with frame collapsed, of 11' 3" Frame is collapsed by taking out a few bolts, pins and unions—about a thirty minute job in the field.]

AS much as we have urged contractors to study Koehring construction, few Koehring owners seem to care much about *how* the Koehring gets *results*.

They seem satisfied to know that between the man on the operating platform, and the concrete on the subgrade is a responsive, *smooth, speedy functioning unit* that delivers a greater yardage to the subgrade than is ordinarily expected from the drum capacity! That's what means extra profits for them!

Of course they know Koehring Heavy Duty Construction is "*there*"—*must be* because of Koehring record of low maintenance, reliability on the job—and long service life!

SIZES

Pavers—7-E, 13-E, 27-E. Auxiliary equipment and choice of power to suit individual needs. Complies with A.G.C. Standards.

Construction Mixers—10-S, 14-S, 21-S, 28-S. Steam, gasoline or electric power. Mounted on trucks or skids. Rubber tired wheels optional. 28-S on skids only. Complies with A. G. C. Standards.

Dandie Light Mixer—107-S. Two or four cylinder gasoline engine. Power charging skip, or low charging hopper and platform. Rubber tired steel disc wheels or steel rimmed wheels. Complies with A. G. C. Standards.
